

WHISPERGLIDE: OTHERS SAY IT BEST

It's About Quality of Life!

A Personal Experience

Dear Mr. Knuteson,

About 10 + years ago while I was Director of Nurses at a CCRC in New Jersey, I saw an article about the *WhisperGLIDE*. With the help of our Auxiliary and a residents' fund raiser we got the *WhisperGLIDE* in a relatively short period of time. They loved it.

Fast forward a few years to my elective surgery that went very wrong— in the hospital for 7 months and then transferred to my own facility for rehab and wound care.

It was Springtime before I was strong enough to get up and outside.

My husband would bring our dinner in the evening and we would take it out to the *WhisperGLIDE*. The moving sensation was calming and relaxing. I enjoyed spending time with family in an activity WITH them, like I did with my grandparents when young.

Seeing me use the swing, sparked an interest by other families and staff, and now there are more than one *WhisperGLIDEs* being used!

I encourage facilities who have dementia residents or in pain to try the *WhisperGLIDE*. *It is so relaxing that it helped soothe the severe pain I was experiencing.*

Witnessing the residents with dementia use it, I saw a calmness come over them while swinging. Many sang or hummed while swinging; however, 99-percent of them would smile!

Thank you for such an awesome product!!

To have resident-centered care in the continuum of care *you must* look at the patient holistically.

The *WhisperGLIDE* assists by both lowering blood pressure and anxiety and also in the psychosocial, spiritual and environmental areas.

The swing *improves clinical outcomes* and the *quality of life* of our residents.
